Metal ions and Diseases

Dr. Suresh R Patil

NAVAL AGRI BIO TECH., INDIA

Abstract:

Metal ions play very crucial role in animal and plant kingdom. Deficiency or efficiency can cause diseases in both. So far 25 elements are recognised as essential to plants, animals and man. These elements play vital role in life and hence termed as “Bio essential”.

Carbon (C), Oxygen (O), Nitrogen(N) and Hydrogen(H) are available through natural resources like water and air. However, Phosphorus(P), Potassium(K), Sulphur(S), Calcium (Ca) and Magnesium(Mg) are required relatively in large quantities, called as “Macronutrients”. On the other hand, micro quantities of Iron(Fe), Copper(Cu), Zinc(Zn), Manganese(Mn), Molybdenum(Mo) are also essential, termed as “Micronutrients”.

The importance of some of the elements related to human health will be discussed here.In particular, Chromium, Selenium, Copper and Magnesium.
